To: [Patz, Bryce](#)
Subject: Sabey Decatur - data center support letter
Date: Wednesday, January 7, 2026 8:56:00 PM

Bryce,

My name is Caroline Curtis. I'm 27 years old, a lifelong Indiana resident, and a small business owner on the south side of Indianapolis. I'm writing because I care deeply about the future of our city and want to share my perspective in support of the Sabey data center project in Decatur Township.

As someone who grew up here and chose to build my business here, I pay close attention to what kinds of development actually help communities thrive over the long term. From everything I've seen and learned, this project represents the kind of thoughtful, modern investment Indianapolis should be encouraging.

The site is already zoned for industrial use, and the Sabey proposal is far less disruptive than many of the logistics or warehouse developments that could be built there by right. Fewer trucks, less traffic, and more predictable operations matter to people who live and work nearby. Just as important, the tax base this project brings helps fund schools, public safety, and local services without putting additional strain on neighborhoods.

I've also been impressed by the level of transparency and engagement shown by the project team. Not every developer takes the time to answer questions, listen to concerns, and make adjustments. That effort makes a difference, especially for residents like me who want growth but also want it done responsibly.

Indianapolis needs to attract investment that keeps us competitive, creates high-quality jobs, and supports long-term stability. From my perspective as a young business owner who plans to stay here, this project checks those boxes.

Thank you for taking the time to listen to community voices. I appreciate the work you do for our city and hope you'll consider the many residents who see this as a positive step forward.

Best regards,

Caroline Curtis

From: [Chad Baker](#)

Subject: Sabey Decatur project
Date: Wednesday, January 7, 2026 4:44:42 PM

Bryce,

We wanted to reach out directly to share our perspective on the Sabey Decatur project.

We are Andy and Chad Baker both Indiana University alumni and lifelong supporters of the state of Indiana. While our professional work takes us across the country, we remain deeply connected to Indiana and return to Indianapolis frequently for business projects and relationships that span many years.

As entrepreneurs, we care deeply about where forward-looking, well-regarded technology companies choose to invest. States that embrace these companies create opportunity not just for executives, but for college graduates, high school graduates, trade schools, and educational institutions that feed the modern workforce. From our vantage point, that matters far more than short-term political debates.

We have followed the discussion around the Sabey Decatur project closely, even while doing so remotely. Each time we are back in Indianapolis, we're reminded that Indiana's greatest competitive advantage has always been its willingness to think long-term, welcome responsible businesses, and create pathways for young people to build careers close to home.

Technology infrastructure projects like this one are foundational to nearly every industry healthcare, finance, logistics, manufacturing, and AI. When Indiana attracts high-quality technology companies, it strengthens the entire ecosystem: universities, community colleges, workforce training programs, and local businesses alike.

From what we've observed, Sabey represents the kind of company states compete to attract experienced, thoughtful, and committed to doing things the right way. We believe projects like this help ensure Indiana remains competitive nationally and continues to offer real opportunity to the next generation.

We appreciate the time and effort you've put into engaging with this issue and wanted to be sure you heard from Indiana alumni and business leaders who strongly support the state embracing responsible technology investment.

Best regards,

Andy Baker

Subject: IMPORTANT: data center project input
Date: Monday, January 12, 2026 1:13:54 PM

Bryce,

My name is Christopher Scott. I want to be clear at the outset that I have not been hired by anyone, nor am I affiliated with the Sabey project team in any formal way. I am writing purely as a citizen of the State of Indiana who has been following the growing discussion around data center development across the state with genuine professional curiosity.

Over the past several months, I have paid close attention to why certain data center projects are supported while others face opposition, including the CB data center and projects like the proposed Sabey facility in Decatur Township. As part of that process, I reviewed the Sabey data center website, followed local coverage, and spoke with multiple professionals in the real estate, infrastructure, and data center industries. Based on that review—and my own career experience—I am supportive of this project and believe it represents a responsible and appropriate use of industrial land.

For context, I spent more than 20 years at Brightpoint, which at the time was one of the world's largest distribution and logistics companies. I was directly involved in project management and development of distribution warehouse facilities throughout the U.S. and internationally, with building sizes ranging from approximately 100,000 square feet to over 800,000 square feet.

Following Brightpoint, I held a senior position at CBRE, working nationally with companies on large-scale real estate projects for logistics, distribution, and other industrial uses. More recently, I spent several years at AppHarvest in Lexington, Kentucky, where I helped develop, build and operate four major facilities totaling more than 7,500,000 square feet.

Through these roles, I gained extensive, hands-on experience with the daily operational realities of logistics and distribution facilities. Those realities are consistent across markets and include:

- Continuous tractor-trailer traffic throughout the day and night
- Traffic congestion from truck queuing, turning movements, and staging
- Accelerated deterioration of local roads and intersections
- Persistent noise from diesel engines, air brakes, backup alarms, and dock activity
- Increased safety risks for local drivers due to heavy vehicle volumes

- Significant light pollution from 24/7 yard and dock operations

These impacts are not the result of poor management—they are inherent to logistics and warehouse uses.

From an operational standpoint, data centers are fundamentally different. After construction, traffic volumes are minimal and predictable, consisting primarily of employees and occasional service vendors. There is no daily truck traffic, no shipping or receiving operations, no yard activity, and no overnight delivery cycles. Road wear, congestion, and safety impacts are therefore materially lower.

Noise impacts are also substantially reduced. Data center equipment is housed within enclosed structures and designed to meet strict sound attenuation requirements. In my experience, the difference between a logistics facility and a data center—especially for nearby residents—is significant.

Based on decades of experience building and operating large industrial facilities, I believe the Sabey data center represents a quieter, safer, and lower-impact alternative to traditional logistics or warehouse development, while still providing long-term economic and tax benefits to the community.

I appreciate the thoughtful review your department is undertaking and wanted to share this independent, operations-based perspective. I would be happy to provide additional insight or answer questions if that would be helpful.

Respectfully,

Christopher Scott

Subject: Support for Sabey Data Center Project in Decatur Township
Date: Thursday, January 8, 2026 1:53:17 PM

Dear Bryce:

I am writing as a Central Indiana resident and as a former General Counsel and executive of multiple local companies to share my support for the proposed Sabey Data Center project in Decatur Township.

I have followed the project through public meetings, open houses, local media coverage, and online discussion. What has stood out is the project team's consistent engagement with the community—participating in the public process, addressing questions as they arose, operating within the existing zoning framework, and making modifications in response to feedback.

From a governance and process standpoint, it is important that projects are evaluated based on established standards that are consistently applied. When an applicant complies with existing regulations and follows the prescribed variance process, the evaluation should remain grounded in those criteria rather than evolving or informal expectations introduced after the fact.

Data centers are a recognized and growing industrial use that can deliver meaningful economic benefits. Based on the information available, this project appears thoughtfully designed, transparent in its approach, and aligned with Indianapolis's broader economic development goals.

For these reasons, I respectfully encourage the City to support the Sabey project and to maintain a predictable, fair, and principled development process.

Sincerely,
Craig Carpenter

From: [Denny Southerland](#)
To: [Patz, Bryce](#)
Subject: Re: Sabey Data Center
Date: Wednesday, January 7, 2026 2:00:14 PM

Dear Bryce,

My name is Dennis Southerland. I am an officer of Cripe, Inc, an 88 year old , and Indiana-based engineering firm. While my firm is not involved in the Sabey Data Center project and did pursue but did not receive work related to it, I have followed the project with professional interest and have conducted my own diligence.

I am writing to express my support for the project based on its technical merits—particularly with respect to traffic, site use, and building type.

From an engineering and planning standpoint, the Sabey Data Center is a far better outcome for the Kentucky Avenue corridor than the previously contemplated logistics or distribution facilities. Data centers generate significantly fewer truck trips, less peak-hour congestion, and reduced wear on surrounding road infrastructure. From traffic alone, the difference is meaningful.

Additionally, Sabey’s approach to building design and site planning is well established. The facilities they construct are high-quality, durable, and thoughtfully integrated into their surroundings. Compared to many industrial alternatives that could be developed on the site, this project represents a more orderly, lower-impact use.

Having reviewed the publicly available materials and attended meetings, it is clear to me that this project has been carefully planned and evaluated. Based on my experience, it aligns with sound engineering principles and responsible land use.

For those reasons, and independent of any business interest, I believe the Sabey Data Center project makes sense for Decatur Township and Indianapolis, and I respectfully encourage the City to support it.

Sincerely,
Dennis Southerland,

Senior Vice President
Cripe, Inc
317-418-3567

From: [Eric Proctor](#)
To: [Patz, Bryce](#)
Subject: Sabey Data Center
Date: Wednesday, January 7, 2026 1:37:27 PM

Dear Bryce,

My name is Eric Proctor. I am a lifelong Hoosier who recently moved back to Indiana after spending many years as a senior executive in warehouse and logistics operations across the country. I am writing to express my strong support for the Sabey Data Center project in Decatur Township.

My perspective is shaped by direct, hands-on experience. In 1998, I ran operations for Brightpoint in Plainfield, Indiana, when one of the region's first large-scale distribution centers was built. Since then, I have worked in senior roles at Ingram Micro and other Fortune 500 companies, overseeing large logistics networks nationwide. I understand logistics, how they actually operate day and night and the real-world impacts they have on surrounding communities.

Because of that background, I took a close look at the previously contemplated 6–7 building logistics and technology park compared to the proposed Sabey Data Center. I've followed the project through public meetings, news coverage, and social media, and reviewed the available design and site plan materials.

From a professional standpoint, there is no comparison.

Large distribution and logistics facilities generate constant truck traffic early morning, late night, and overnight along with noise, congestion, safety risks, and accelerated road wear. Those impacts are not theoretical; they are unavoidable operational realities. They affect residents, commuters, emergency response, and overall quality of life.

By contrast, the Sabey Data Center represents a materially better outcome for the community. It generates far less daily traffic, minimal heavy truck activity, and a much quieter operating profile. From a living and safety standpoint alone, it is a superior use of the site.

Beyond operations, I am also factoring in Sabey's reputation, building quality, and site design. Their facilities are well planned, durable, and professionally executed very different from the high-turnover, high-impact logistics developments I've spent my career managing.

Based on decades of experience in logistics and distribution, I believe supporting the Sabey Data Center project is the right decision for Decatur Township and Indianapolis. It delivers economic value while avoiding many of the unintended consequences that come with large-scale warehouse development.

I respectfully encourage the City to support this project.

Sincerely,
Eric Proctor

From: [Ernie Vargo](#)
To: [Patz, Bryce](#)
Subject: Sabey Decatur Project
Date: Thursday, January 8, 2026 12:50:39 PM

Mr. Patz,

Good afternoon. As the former president and CEO of Eskenazi Health Foundation and a long-term philanthropic and health care leader, I wanted to share my perspective regarding the proposed Sabey Decatur project.

As part of Eskenazi Health, I saw every day how critical strong community partnerships are to delivering care and services to the least fortunate people who rely on us most. Nonprofit organizations depend on a stable, well-funded local economy and on corporate partners who are committed to being involved, engaged, and supportive over the long term.

While my role is not to evaluate the technical aspects of development projects, I have followed the public discussion around the Sabey Decatur data center. Consistently, Sabey is described as a well-regarded company with a strong track record of operating responsibly and being actively involved in the communities where they invest.

For nonprofits, this matters. Large, permanent employers with long-term commitments help create the tax base that supports public health, education, and social services. Just as importantly, companies like this often-become partners—supporting charitable organizations, workforce initiatives, and community programs that will serve the residents of Indianapolis and central Indiana.

Indianapolis has many nonprofits doing essential work, and our ability to continue serving patients and families depends in part on the broader economic environment around us. When the city attracts high-quality companies that are financially strong and community-minded, it strengthens the entire ecosystem that nonprofits rely on.

For these reasons, I am in full support of the Sabey Decatur project and believe it represents a positive step forward for our city and the organizations that serve our community.

Thank you for your time and consideration.

Sincerely,

Ernie Vargo

Date: Wednesday, January 7, 2026 1:51:04 PM

Dear Bryce,

My name is Harrison Greenberg. I'm a lifelong Indianapolis resident, a young professional, and currently work as a scout for the Indiana Pacers. I'm writing to express my support for the Sabey Data Center project in Decatur Township.

In my work, I see firsthand how organizations that plan for the future stay competitive whether in sports, business, or cities. Success doesn't come from standing still. It comes from smart, disciplined decisions that build long-term strength.

I've followed this project closely through community meetings, presentations, and local coverage. What stands out to me is that this development is forward-looking, well planned, and aligned with where technology and the economy are headed. Data centers may not be flashy, but they quietly power the systems that modern life depends on.

As a young professional who wants to build a career and a life in Indianapolis, I care about whether our city continues to attract world-class companies and investment. Projects like this help ensure Indianapolis remains relevant, competitive, and attractive to people who want to stay here long term.

I believe the Sabey project represents thoughtful growth that benefits the broader community, and I respectfully encourage the City to support it.

Sincerely,
Harrison Greenberg

Attachments: [image001.png](#)

CAUTION: This email originated from outside of the organization and contains an attachment. Unless you recognize the sender and know the contents are safe, do not open the attachment.

Hi Bryce,

I know you and I have not met, but my name is Isaac Bamgbose, and I am the Founder and CEO of New City Development. I'm writing to share my perspective in support of the Sabey Decatur data center project.

Over the past several years, NCD Partners has developed and invested in multiple projects across the greater Indianapolis region, including in Indianapolis, Plainfield, Carmel, and Fishers. Through that work, we've partnered with cities, nonprofits, workforce organizations, and community stakeholders, and we've seen firsthand what types of development truly move a city forward.

I have been following the Sabey Decatur data center project closely both through local news coverage and through Sabey's public project website and I've taken the time to do my own independent research. Based on that review, I believe this project represents the kind of responsible, long-term investment that benefits not just a site, but the broader city and community.

From a citywide perspective, projects like this are important for several reasons:

- Stable, long-term tax base that supports schools, public safety, infrastructure, and nonprofit organizations without placing additional strain on residential neighborhoods
- High-quality job creation, both directly and indirectly, including construction, skilled trades, technology, operations, and professional services
- Support for nonprofits and workforce development, as large, permanent employers often become long-term partners and contributors to local charitable and educational institutions
- Reduced traffic and land-use impacts compared to traditional logistics or distribution developments previously approved for similar sites
- Economic diversification, which strengthens the city's resilience and attractiveness to future employers and investors

Indianapolis has an opportunity to continue positioning itself as a city that welcomes

thoughtful, well-planned development aligned with the modern economy. Data centers are foundational infrastructure for healthcare, finance, education, and technology and cities that understand this are the ones that remain competitive.

In my professional opinion, the Sabey project aligns with best practices we've seen across Indiana and other growth markets. It reflects the kind of partnership between private investment and public benefit that allows cities to grow responsibly while supporting nonprofits, job creation, and long-term community stability.

Thank you for your time and for your continued engagement on this issue. I wanted to be sure you heard from a local developer who strongly supports this project and believes it is in the best interest of the city of Indianapolis.

To be clear, I do NOT have a stake, investment, or any sort of partnership interest in the Sabey project; I am simply a Marion county/City of Indianapolis business owner & resident who is interested in seeing our City thrive!

Sincerely,

Isaac Bamgbose

From: [Isaac Olive](#)
To: [Patz, Bryce](#)
Subject: Sabey Data Center Support
Date: Wednesday, January 7, 2026 1:59:09 PM

Dear Bryce,

My name is Isaac Olive. I am a Central Indiana resident and formerly worked at the Indiana Economic Development Corporation. Since that time, I have also worked with several high-technology companies across the country. I'm writing to express my strong support for the Sabey Data Center project in Decatur Township.

I care deeply about Indiana's long-term success, which is why I've taken a close interest in this project. I attended all of the public meetings, followed the variance process closely, and have spent time researching Sabey's work in other communities nationwide. What I've seen is a consistent track record of well-planned, community-compatible infrastructure projects that deliver real economic value while maintaining a low community impact.

From both a technology and economic-development perspective, data centers are foundational infrastructure. They support innovation, healthcare, education, logistics, and national competitiveness, yet they often do so quietly without the traffic, noise, or strain on public services associated with many other industrial uses.

What stands out to me about this project is its balance: meaningful tax-base growth, long-term stability, and thoughtful site planning paired with genuine community engagement. The project team has shown up, listened, and responded to something that matters greatly in earning public trust.

Having worked on both sides of economic development, I believe it is essential that cities remain predictable, fair, and forward-looking. Supporting projects that comply with existing standards and demonstrate clear community benefit is how Indiana continues to compete successfully for high-quality investment.

In my judgment, the Sabey Data Center project is a positive opportunity for Decatur Township and Indianapolis as a whole. I respectfully encourage the City to support it.

Sincerely,
Isaac Olive

February 18, 2026

Metropolitan Development Commission & Hearing Examiner
200 E. Washington St. STE 2060
Indianapolis, IN 46204

Dear Hearing Examiner & Members of the MDC,

On behalf of the Indiana Technology & Innovation Association (ITIA), I write in support of the proposed Sabey Data Center project in Decatur Township. Data centers are essential infrastructure for today's economy, supporting cloud computing, cybersecurity, artificial intelligence, digital commerce and more. This project presents a meaningful opportunity for Indianapolis to strengthen its position as a competitive hub for technology and innovation.

The Sabey development would deliver significant and sustained economic value to the community. The project is expected to generate more than \$20 million annually in property tax revenue, expanding the local tax base through a capital-intensive, privately funded investment. Additionally, over the course of development, hundreds of high-paying construction jobs will be generated in the community. And like other data center developments, it would support the community and surrounding businesses and industries through a strong 6-8x job multiplier effect.

Projects like the Sabey Data Center are designed to deliver lasting community benefits without placing additional burdens on residents. Sabey has committed more than \$5 million toward infrastructure improvements in Decatur Township, including road upgrades and other community priorities. Through responsible planning and modern energy and water management practices, the project will contribute positively to the community without increasing water or utility rates for local residents.

For these reasons, ITIA recommends approval of the Sabey Data Center project as a responsible, forward-looking investment that will strengthen Indianapolis's tech and innovation economy and reinforce Indiana's leadership in the digital age.

Respectfully,

A handwritten signature in black ink that reads "Jennifer Hallowell". The signature is written in a cursive, flowing style.

Jennifer Hallowell
ITIA Executive Director

[li_blue.png](#)
[fb_orng.png](#)
[x_grn.png](#)
[ig_blk.png](#)

CAUTION: This email originated from outside of the organization and contains an attachment. Unless you recognize the sender and know the contents are safe, do not open the attachment.

Bryce,

My name is Jason Sondhi, and I'm writing to share my perspective in support of the Sabey Decatur data center project.

I am the CEO of Exos Companies, an Indianapolis-based, full-service IT consulting and staffing firm that provides cybersecurity, talent, and IT solutions to clients across the United States. Exos is a minority business enterprise, and over the past decade we've grown from a local firm into a multi-market organization supporting both public and private-sector clients who rely on modern, secure technology infrastructure to operate.

Because of my work in technology, I understand firsthand how foundational data centers are to today's economy. They are not speculative or abstract projects—they are the backbone that supports healthcare systems, financial services, education platforms, cybersecurity, logistics, and the very technologies students and workers are being trained to support. Cities that understand this reality position themselves to compete; cities that don't risk being left behind.

I've followed the Sabey Decatur project through local news coverage and the project website and have taken the time to review the facts surrounding

the development. From my perspective, this project reflects the kind of thoughtful, well-capitalized technology investment that benefits a city long term particularly when compared to more intensive logistics or distribution uses previously contemplated for similar sites.

Equally important to me is community impact. Giving back has been a priority throughout my career. I currently serve on the boards of the Weaver Popcorn Fundraising Foundation and the St. Vincent Foundation, and I've been actively involved with organizations such as the Christel DeHaan Foundation and the Park Tudor Alumni Board. I also founded IT Equipment Round UP, which provides gently used technology to nonprofits, and Jingle Books, a holiday initiative that has delivered more than 8,000 books to Indianapolis children to inspire learning and opportunity.

From that nonprofit and community lens, projects like Sabey Decatur matter. A stable, long-term commercial tax base helps fund schools, public safety, and the nonprofit organizations that serve our city's most critical needs. Responsible technology employers also become long-term community partners supporting workforce development, charitable initiatives, and inclusive economic growth.

Indianapolis has an opportunity to continue building an economy that supports innovation, job creation, and community investment. In my view, the Sabey Decatur project aligns with those goals and represents the kind of development that strengthens both our economic foundation and our civic fabric.

Thank you for your time and for your thoughtful engagement on this issue. I wanted to ensure that the perspective of a local technology leader and nonprofit advocate was part of the conversation.

Sincerely,

Jason R. Sondhi

From: [Jay Greenberg](#)
To: [Patz, Bryce](#)
Subject: Data center
Date: Wednesday, January 7, 2026 1:45:00 PM

Dear Bryce,

My name is Jay Greenberg. I recently moved back to Indianapolis after time away and grew up here. Over the years, I've worked with several Indiana-based organizations, including the Indiana Pacers, Washington Prime Group, and other local firms. I'm writing to express my support for the Sabey Data Center project in Decatur Township.

Coming back to Indianapolis has reinforced how much potential this city has and how important it is that we continue to evolve. Cities that succeed today are the ones that retain talent by offering opportunity, relevance, and a clear sense of direction. Modern infrastructure projects play a quiet but critical role in that equation.

I've followed this project through public meetings, online coverage, and social media. What I see is a development that reflects where the economy is going, not where it has been. Data centers are foundational to nearly every sector we rely on, yet they operate largely out of sight while delivering outsized economic benefit.

For a city like Indianapolis, projects like this help anchor the next generation of employers and professionals. They also send an important signal to people like me those who choose to come back that Indianapolis is serious about competing nationally while staying grounded locally.

I believe supporting this project is consistent with Indianapolis's long-term interests and respectfully encourage the City to move it forward.

Sincerely,
Jay Greenberg

[Sent from Yahoo Mail for iPhone](#)

From: [Jessica Maginn](#)
To: [Patz, Bryce](#)
Subject: Decatur Data Center Project
Date: Thursday, January 8, 2026 1:02:09 PM

Bryce,

My name is Jessica Maginn, and I serve as the Senior Marketing and Communications Specialist for Indy Women in Tech (IWIT). I'm writing to share our perspective on the proposed Sabey Decatur Data Center project and why developments like this are important to the mission we serve across Indiana.

Indy Women in Tech exists to empower women and girls to pursue and thrive in technology careers. Our organization supports individuals at every stage of the pipeline from early K-12 STEM exposure, to adults transitioning into tech careers, to professionals seeking advancement. We do this through education and training programs, mentorship, networking opportunities, paid internships, scholarships, and direct connections to employers in Indiana's growing tech ecosystem.

For the women we support, access matters. Access to modern employers. Access to real-world technology environments. Access to long-term, stable career pathways that lead to financial independence and professional growth. Large-scale technology infrastructure projects like Sabey Decatur directly strengthen that ecosystem.

Data centers are foundational to today's digital economy. They support cloud computing, AI, healthcare systems, logistics, finance, and countless tech-driven services. When this infrastructure is built locally and responsibly, it creates opportunities for Indiana-based talent to participate in and benefit from the tech sector without leaving the state.

From our vantage point, the Sabey Decatur project represents the kind of forward-looking investment that aligns with workforce development, education, and inclusion goals. The project brings high-quality jobs, long-term tax base support for schools and public services, and the type of stable technology presence that helps organizations like ours connect women to meaningful careers in tech.

Equally important, we value development that is transparent, well-planned, and community-conscious. A project that balances economic growth with local engagement helps ensure that the benefits of Indiana's tech expansion are broadly shared.

Indiana's tech future depends on both people and infrastructure. Sabey Decatur helps strengthen that foundation, and for the women and girls we serve, that matters.

Thank you for your time and for considering perspectives from organizations working to build a more inclusive and resilient tech economy in our state.

Sincerely,
Jessica Maginn
Senior Marketing & Communications Specialist
Indy Women in Tech

From: [Jim Merritt's Indiana](#)
To: [Patz, Bryce](#)
Subject: Sabey Data Center project in Decatur Twp
Date: Friday, January 9, 2026 11:24:58 AM

Dear Bryce,

My name is Jim Merritt. I am a lifelong Indiana resident and was privileged to serve in the Indiana Senate for three decades. Please accept this correspondence as my message of support for the proposed Sabey Data Center project in Decatur Township.

I understand the complexity of the issues cities face when balancing growth, community input, economic competitiveness, and long-term fiscal responsibility. These decisions are rarely simple and often require looking beyond the immediate noise to evaluate what is in the city's best interest over time. I thank you for your public service. It ain't easy.

I have followed this project closely, attended public meetings, and reviewed the information made available through the variance process and public reporting. What stands out to me is that this project has proceeded transparently, in accordance with existing legal frameworks, and with a willingness to engage the community and address concerns.

From a policy and governance perspective, developments like this are precisely the kind of long-term infrastructure investment cities should encourage today. Data centers support nearly every sector of the modern economy, generate substantial and reliable tax revenue, and do so with relatively modest demands on public services compared to many other permitted industrial uses. Furthermore, I served as the Indiana Senate Utility Committee Chairman for 16 years. I believe the electrical grid in southwest Marion County will be vastly improved if and when the Sabey Data Center is built.

Equally important, Indianapolis's credibility as a place to do business depends on consistency and predictability in how it applies its rules. When a project meets established standards and follows the proper channels, supporting it reinforces trust in the city's processes and leadership.

In my judgment, the Sabey Data Center project represents a positive opportunity for Indianapolis economically, fiscally, and strategically. I respectfully encourage the City to support it as part of a thoughtful approach to the city's future.

Sincerely,
James W. Merritt, Jr.

From: [Joe Dayan](#)
To: [Patz, Bryce](#)
Subject: Sabey Data Center
Date: Wednesday, January 7, 2026 1:37:54 PM

Dear Bryce,

My name is Joe Dayan. I'm a Central Indiana resident, work as a local salesperson for a lighting firm, and grew up here. I've also coached football at Brebeuf Prep. I'm writing to express my support for the Sabey Data Center project in Decatur Township.

I want to be clear upfront: my company does not stand to benefit directly from this project. My support comes from being a longtime member of this community and from what I've seen by attending every community meeting and open house related to the project.

From that perspective, the Sabey project stands out as a practical, responsible use of the site. Compared to many other industrial developments, it creates less daily traffic, fewer truck movements, and a safer overall pattern for local roads. The planned infrastructure improvements, especially road upgrades are real benefits for Decatur Township residents, not just the project itself.

As someone who has spent years working with young people through coaching, I also see the broader value. This kind of investment strengthens the local tax base, supports schools and community services, and helps create a future where families want to stay and invest in the area.

I've listened carefully to concerns raised at meetings, and I've also seen the project team respond thoughtfully and transparently. That matters. It shows respect for the community and the process.

For these reasons, I believe the Sabey Data Center project is a net positive for Decatur Township and Indianapolis, and I respectfully encourage the City to support it.

Sincerely,

Joe Dayan

My name is Jon Hooker and I am the President of the Central Indiana Building and Construction Trades Council. I am proud to represent over 35,000 men and women who make up the Union Construction Industry here in Indy. I am writing you today to express our support for the 2025-CAP-856 / 2025-CVR-856 / 6400, 6449, 6500, 6559, 6565, 6600, and 6833 Kentucky Avenue, and 6700, 7924, 7944, 8002, 8032, and 8210 Camby Road Project.

Projects like this are integral to our city and state to keep us growing economically. This estimated \$4 billion dollar project will have a positive impact on our industry as well. Data Center projects are simple on the outside and extremely detailed work inside for our mechanical, electrical, and plumbing contractors and members. This job alone is estimated to employ upwards of 600 plumbers and fitters and 400 electricians for over a year. For my members that means earning good wages and sleeping in their own homes. For our apprentices, this project allows them to learn how to build, install, and maintain the latest technologies that will make them better prepared for their career.

With all of the economic growth we have been experiencing here in Central Indiana it has enabled us to grow our membership by almost 8,000 in the last 10 years to meet the demand of our clients. This means that 8,000 more Hoosiers are earning union wages, health insurance, and retirement. They are buying houses and cars, raising families, and contributing to our growing vibrant community. Sabey's commitment to building their project using 100% union contractors and members will help us continue to lift up existing and new families.

The Central Indiana Building Trades Council and our 21 Local Union affiliates stand in full support of this project and ask for your consideration to support this project as well.

Please don't hesitate to reach out if you have any follow up questions.

Thanks,
Jon

Dear Bryce,

My name is Josh Martin. I'm a real estate professional in my early 30s and a Central Indiana resident, and I'm writing to voice my support for the Sabey Data Center project in Decatur Township.

People my age are deciding right now where to build careers, buy homes, and start families. Those decisions are influenced by whether a city is growing, attracting modern employers, and planning for the future—or standing still.

I've followed this project closely through open houses, social media, and local news. What I see is a compliant, well-thought-out development that brings long-term economic value with limited downside compared to many other permitted uses.

Blocking or discouraging projects like this doesn't preserve opportunity—it pushes it elsewhere. Cities that win are the ones that balance community input with a clear commitment to growth.

I hope Indianapolis chooses to support this project and the future it represents.

Sincerely,

--

JOSH MARTIN

Subject: INDIANA
Date: Wednesday, January 7, 2026 3:24:04 PM

Bryce,

My name is Landon Haffner. I am currently a freshman at Purdue University and a lifelong Central Indiana resident. I wanted to share my perspective in support of the Sabey Decatur data center project and why developments like this matter to students like me who are investing in Indiana's future.

Students at Purdue and other state universities are preparing for careers in engineering, technology, logistics, cybersecurity, finance, and advanced manufacturing. We are making a significant investment in our education with the hope that Indiana will offer meaningful career opportunities when we graduate. Projects like Sabey's help ensure that those opportunities exist here—so students don't feel forced to leave the state to build their careers.

Technology infrastructure is not abstract to our generation. Data centers support the systems behind AI, cloud computing, healthcare, national security, and nearly every modern industry students are training to enter. When Indiana welcomes responsible technology companies, it sends a strong signal that the state intends to compete nationally and retain its educated workforce.

Indiana has done an excellent job building strong public universities and attracting students from across the Midwest. The next step is making sure there is a clear path from education to employment. If high-quality tech projects are discouraged or pushed to other states, Indiana risks losing both companies and graduates to regions that are more forward-thinking.

From what I've followed, the Sabey Decatur project appears thoughtfully planned, with attention to community engagement, long-term tax base growth, and reduced traffic and safety impacts compared to traditional logistics or distribution uses previously approved for the site. That matters

to students who want to see development done responsibly and with long-term benefits in mind.

I hope the city considers the perspective of students who want to live, work, and contribute to Indiana after graduation. Embracing modern technology infrastructure is an important part of keeping Indiana competitive and creating opportunity for the next generation.

Thank you for your time and consideration.

Sincerely,

Landon Haffner

Freshman, Purdue University

Subject: Decatur Township Data Center
Date: Wednesday, January 7, 2026 1:01:01 PM

Dear Bryce,

My name is Luke Scheiber, and I am a Central Indiana real estate professional. I'm writing to express my support for the Sabey Data Center project in Decatur Township.

I closely follow development activity across Indianapolis because it directly affects investment decisions, job growth, and long-term market health. I have attended open houses and followed coverage of this project, and I believe it represents a strong, responsible use of industrially zoned land.

Large-scale projects like this send a signal - either that Indianapolis welcomes thoughtful, compliant development, or that uncertainty makes long-term investment more difficult. That signal matters not just to one company, but to everyone evaluating whether to deploy capital here.

The Sabey project brings durable value, modern infrastructure, and meaningful tax revenue with fewer external impacts than many alternative industrial uses. From a real estate and investment perspective, that is exactly the kind of development that strengthens a market over time.

I encourage the City to support this project and reinforce Indianapolis's reputation as a place where smart development can succeed.

Best regards,
Luke

My name is Monty Matuka. I am an Indianapolis resident, a small business owner, and the founder of MELI, a fashion and culture company rooted in the mission of More Equality Less Ignorance. I am writing to offer my perspective in support of an informed and fact based evaluation of the proposed Sabey Data Center project in Decatur Township.

At MELI, our work centers on education, opportunity, and informed decision making, especially within communities that have historically been excluded from economic growth. For minority communities and young entrepreneurs in Indianapolis, access to modern and high skill industries is increasingly essential. These industries can create long term career pathways, transferable technical skills, and opportunities for advancement, contracting, and ownership when implemented responsibly.

I attended public meetings in Decatur Township and listened carefully to the concerns raised by residents. I also took time to conduct my own research. After reviewing publicly available data, regulatory standards, and comparable data center projects across the country, I found that many commonly cited concerns related to water usage, noise, and environmental impact are measurable, regulated, and subject to oversight. In many cases, these impacts are comparable to or lower than other industrial uses already permitted under existing zoning frameworks.

What I believe is most important in this process is ensuring that decisions are grounded in accurate information. When discussions are driven by incomplete or inaccurate claims, communities risk making decisions based on fear rather than facts. Historically, minority communities are the ones most affected when investment is stalled without clear evidence based reasoning, resulting in missed opportunities for long term stability and growth.

I am not writing to minimize community concerns or to dismiss the importance of accountability. On the contrary, I believe thoughtful development requires transparency, enforceable commitments, and continued community engagement. My perspective is simply that factual information, regulatory context, and long term outcomes deserve careful consideration alongside resident input.

At its core, this moment presents an opportunity for Indianapolis to model how complex development decisions can be approached with clarity, balance, and integrity. Prioritizing evidence, transparency, and long term community benefit helps ensure that progress is inclusive and that future generations are not left behind.

Thank you for your time and for your service to our city. I appreciate your commitment to thoughtful and informed decision making.

Sincerely,
Monty Matuka
Founder and Creative Director, MELI

Subject: Urgent
Date: Wednesday, January 7, 2026 1:18:03 PM

Dear Bryce,

I am writing as a Central Indiana resident, business leader, and President of Telamon to express my support for the proposed Sabey Data Center project in Decatur Township.

Over many years, I have seen firsthand how thoughtful, well-executed private investment can strengthen communities—by expanding the tax base, creating employment pathways, and supporting long-term economic resilience. Based on what I have reviewed and observed through public meetings, open houses, and ongoing engagement, this project reflects that type of investment.

The Sabey project is compliant, carefully planned, and aligned with modern infrastructure needs. Data centers are not speculative or fringe uses; they are foundational to today's economy and increasingly to public services, healthcare systems, and national competitiveness.

Importantly, this project offers meaningful economic upside to the community with limited impact relative to other industrial uses already permitted under existing zoning. Discouraging projects like this risks signaling uncertainty to employers and investors evaluating Indiana as a place to grow.

I believe this project represents a positive opportunity for Decatur Township and the broader Indianapolis region, and I respectfully encourage the City to support it.

Sincerely,
Alex Paskoff
President, Telamon Corporation

Subject: Sabey Data Center
Date: Wednesday, January 7, 2026 4:27:48 PM

Dear Bryce,

My name is Patrick Brickley. I am a lifelong Indiana resident and operate several local companies. I'm writing to strongly support the Sabey Data Center project in Decatur Township.

I care deeply about Indianapolis as a city not just as a place to do business, but as a place where culture, arts, sports, restaurants, and local businesses can thrive. That kind of city does not sustain itself without attracting world-class companies and long-term investment.

Projects like the Sabey Data Center matter because they strengthen the entire economic ecosystem. They bring high-value employers, expand the tax base, and support the venues, restaurants, nonprofits, and cultural institutions that make Indianapolis a great place to live and visit.

I've attended presentations and followed the project online, and I'll say this plainly: the proposed building and site design are far more attractive and forward-looking than another distribution or logistics center. From both a land-use and visual standpoint, this is an upgrade not a compromise.

If Indianapolis wants to compete with peer cities, we must be willing to welcome modern, high-quality development that aligns with where the economy is headed. This project does exactly that.

I respectfully urge the City to support the Sabey Decatur Data Center project and the broader vision it represents for Indianapolis.

Best regards,

Pat

Subject: Sabey Data Center Project
Date: Thursday, January 8, 2026 4:58:00 PM

Dear Bryce,

My name is Pat Commiskey. I served in law enforcement in Central Indiana for more than 40 years. I'm writing to express my support for the Sabey Data Center project in Decatur Township.

Over the course of my career, I worked in and around Decatur Township and understand both the strengths of the community and the challenges it has faced over time. I've seen areas improve when there is sustained investment, and I've seen areas decline when there isn't. Public safety, schools, fire protection, and community stability all depend on a strong and reliable tax base.

I attended the public meetings related to this project and paid close attention to the discussions. Like many people, I heard strong voices on both sides. What stood out to me, though, was that beyond the people yelling, many of the residents who stayed, listened, and asked questions genuinely believed this project could be good for the community especially in terms of tax dollars supporting schools, police, fire, and local services.

From what I've reviewed and heard directly from the project team, Sabey is offering a thoughtful development that brings long-term value without the kinds of problems law enforcement deals with daily heavy traffic, constant truck activity, noise complaints, and safety risks. Compared to other industrial uses that could be built on the site, this is a far better outcome for quality of life and public safety.

I've also seen what happens when areas are ignored or underinvested in. That leads to decline, not protection. This project represents an opportunity to stabilize and strengthen Decatur Township while supporting the broader needs of Indianapolis.

Based on my experience, my attendance at the meetings, and conversations with many residents, I believe the Sabey Data Center project makes sense for our city, and I respectfully encourage the City to support it.

Sincerely,

Pat Commiskey
Retired Lieutenant IMPD

Subject: Sabey Project
Date: Wednesday, January 7, 2026 7:42:51 PM

Bryce,

My name is Rob Albright. I wanted to reach out directly after attending the community meetings and following the discussion around the Sabey Decatur project.

I'm a lifelong Indiana resident, a local business owner, and a graduate of Indiana University. I also had the privilege of playing football at IU in the 1980s, which shaped a lot of how I view teamwork, discipline, and long-term commitment to this state.

I've attended all of the community meetings in person and have taken the time to listen closely to both concerns and facts. From my perspective, the Sabey Decatur project represents thoughtful, responsible development that aligns with Indiana's long-term economic interests. Compared to the previously approved logistics and warehouse uses for the site, this project appears to offer fewer traffic and safety impacts while providing meaningful long-term tax base benefits for schools, fire, police, and local services.

As someone who has lived and worked in Central Indiana for decades, I believe it's important that we evaluate projects based on facts, planning, and outcomes not fear of change. Indiana has always succeeded when it embraces growth that is well-managed and forward-looking.

I appreciate the time and effort you've put into engaging with the community and listening to different perspectives. I wanted you to know that there are many residents like myself who support this project and believe it makes sense for our city and state.

Thank you for your time and service.

Best regards,

Rob Albright

Indiana University Alum

Former IU Football Player (1980s)

Lifelong Indiana Resident

Local Business Owner

Subject: Sabey Decatur Data Center Project - Please Support
Date: Wednesday, January 7, 2026 4:45:08 PM

Bryce,

My name is Tag Birge, and I'm the Founder of Birge & Held. I'm writing to share my perspective in support of the Sabey Decatur data center project and why I believe it is important for Indianapolis and the nonprofit community in particular.

Throughout my career, my work has focused on long-term investment, community stewardship, and supporting organizations that strengthen cities from the inside out. Birge & Held has partnered with businesses, civic leaders, and nonprofits across Indiana, and one thing has remained consistent: sustainable cities require a reliable economic base that allows nonprofits, schools, and public services to thrive.

I've followed the Sabey Decatur project closely through news coverage, public materials, and the project website, and I've taken the time to understand both the concerns raised and the facts presented. In my view, this project represents the type of disciplined, high-quality investment that cities benefit from over decades not just election cycles.

For nonprofits especially, projects like this matter. A strong and predictable commercial tax base supports funding for education, social services, workforce training, public safety partnerships, and charitable organizations that serve the most vulnerable residents. Unlike short-term or transient uses, well-capitalized technology infrastructure creates stability something nonprofits depend on to plan, grow, and deliver impact.

Additionally, data centers are a critical part of the modern economy. They support healthcare systems, educational institutions, financial services, and emerging technologies that young people are being trained for today. When Indianapolis welcomes reputable technology companies, it sends a message

that the city is committed to opportunity, innovation, and retaining talent.

From what I've reviewed, the Sabey project also reflects thoughtful land use providing economic benefit with fewer day-to-day disruptions than many alternative industrial uses. That balance matters in building trust between development and community.

Indianapolis has an opportunity here to move forward in a way that strengthens its economic foundation while supporting nonprofits, jobs, and long-term community outcomes. Based on my experience, this is the kind of project cities compete to attract and benefit from when they do.

Thank you for your time and consideration. I appreciate the seriousness with which you are approaching this issue and wanted to ensure this perspective was part of the conversation.

Sincerely,

Tag Birge

Subject: Sabey Data Center Project in Decatur Township
Date: Wednesday, January 7, 2026 2:04:22 PM

Dear Bryce,

My name is Tom Ertel. I am Indiana resident and have spent my career as an accountant working with EY and other large Indiana-based firms. I am writing to express my support for the proposed Sabey Data Center project in Decatur Township.

Over the years, I've worked closely with both for-profit companies and nonprofit organizations, and I've seen firsthand how a strong, predictable tax base is essential to sustaining the community services people rely on—schools, public safety, and nonprofit organizations that fill critical gaps government alone cannot address.

What stands out to me about this project is its ability to generate significant, long-term tax revenue with relatively low demand on public services compared to many other industrial uses. That matters. Stable revenue supports not only municipal budgets but also the nonprofit ecosystem that depends on a healthy local economy and consistent public funding.

I have followed the variance process, attended open houses, and reviewed the public information available. From my perspective, this is a compliant, well-planned project that aligns with existing industrial zoning and provides measurable community benefit. Importantly, it does so without displacing residents or overburdening infrastructure.

From a fiscal responsibility standpoint, discouraging or delaying projects like this introduces uncertainty that ultimately hurts communities—particularly nonprofits and public institutions that depend on reliable funding over time.

For these reasons, I respectfully encourage the City to support the Sabey Decatur Data Center project. It represents thoughtful development, sound economics, and a positive outcome for the broader community.

Sincerely,
Tom Ertel

Subject: Data Center
Date: Wednesday, January 7, 2026 8:57:50 PM

Dear Bryce,

My name is Tony Kroot. I'm a lifelong Indianapolis resident and the former owner of Crown Liquors, where I operated stores across the city for many years. I grew up here, know this city well, and am very familiar with Decatur Township and the surrounding area. I can tell you Decatur needs help with their roads and business development.

Over decades of running businesses throughout Indianapolis, I've seen what works for neighborhoods and what doesn't. I've also seen how important it is for the city to attract investment that is stable, long-term, and thoughtful about its impact.

I've followed the Sabey Data Center project closely and have paid attention to the discussions around it. From my perspective, this is a responsible use of the site and a far better outcome for the area than many other industrial options that could be built there. It brings significant tax revenue, limited traffic, and long-term value without the constant congestion and disruption that often comes with distribution or logistics facilities.

Decatur Township has always played an important role in Indianapolis's growth, and projects like this help ensure it continues to do so in a way that benefits residents, local services, and the broader city.

Based on my experience and familiarity with Indianapolis, I believe supporting this project is the right decision, and I respectfully encourage the City to move it forward.

Sincerely,
Tony Kroot

From: [Vincent Donargo](#)

Subject: Decatur Data Center
Date: Wednesday, January 7, 2026 1:58:56 PM

Dear Bryce,

My name is Vincent Donargo. I am a Central Indiana resident and have served as CFO for multiple Indiana-based companies over the past three decades. I am writing to express my support for the Sabey Data Center project in Decatur Township.

From a financial and economic standpoint, projects like this are exactly the type of long-term, stabilizing investments communities should seek. Data centers generate substantial assessed value, consistent tax revenue, and durable economic benefits without placing disproportionate demands on public services.

I have followed the variance process closely, attended open houses, and reviewed the public materials. What stands out is that this is a compliant, thoughtfully designed project that fits within the area's industrial framework while delivering greater fiscal benefit than many alternative uses.

Predictability matters to markets, to employers, and to municipalities. When a city signals that compliant projects can be delayed or rejected despite meeting standards, it introduces risk that ultimately costs the community investment and revenue.

From a purely economic and fiscal perspective, supporting this project is a prudent decision for Indianapolis.

Respectfully,
Vincent Donargo

UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA
CENTRAL MIDWEST REGIONAL COUNCIL OF CARPENTERS

771 Greenwood Springs Drive
Greenwood, IN 46143

Phone: (317) 807-5722
Fax: (317) 807-5729

Dear Hearing Examiner/Members of the MDC,

On behalf of the Central Midwest Carpenters Union, representing over 37,000 skilled professionals across Indiana, Kentucky, Ohio, neighboring regions, and specifically our headquarters in Greenwood, IN, we write to express our strong support for the Sabey Data Centers project at Decatur Technology Park. The Central Midwest Carpenters Union is dedicated to fostering economic growth, equity, and professionalism within the communities we serve. Our commitment to building robust partnerships with contractors and developers is rooted in the belief that union labor ensures the highest standards of quality, safety, and community impact. The Sabey Data Center exemplifies these values through its focus on responsible development and its long commitment to union partnerships across the country.

Sabey's proposal brings tangible benefits to Decatur Township. The project will provide hundreds of well-paying, union construction opportunities, ensuring that local tradespeople are employed under fair and safe conditions with strong wages and benefits. In addition to construction, the data center and its tenants will create over 100 permanent, skilled roles with competitive compensation, delivering sustained economic impact for local families. Sabey's campus is designed to minimize noise, traffic, and environmental impact, strengthening neighborhood value while supporting local tax revenues. Sabey's collaboration with union labor ensures that the project is built to the highest standards by highly trained professionals, reinforcing our shared commitment to safety, quality, and community investment.

Our union prioritizes not only technical excellence but also the values of cooperation, leadership, and partnership. We believe that projects like the Sabey Data Center set a high bar for responsible development, bringing together the best of technology, skilled labor, and community stewardship. The Central Midwest Carpenters Union stands ready to support this project and partner with Sabey to ensure its success. We urge community leaders and stakeholders to support Sabey Data Centers as a model for positive growth in Decatur Township.

Sincerely,

Wallace E. Turner
Millwright Business Representative
Central Midwest Carpenters Union
